

Explore Open Vascular Surgery for Lower Extremity Arterial Occlusive Disease

LeMaitre is hosting a minimally invasive In Situ Bypass Training Program with Dr. William Raible at St. Peter's Hospital Albany, NY

The LeMaitre® Valvulotome is an innovative instrument that uses self-sizing, self-centering hoops for well positioned, clean valve cutting, decreased wound necrosis and faster patient recovery.

Improve your in situ bypass with the LeMaitre Valvulotome:

- Faster completion times
- Higher patency rates
- Easier fistula finding
- Less invasive procedures

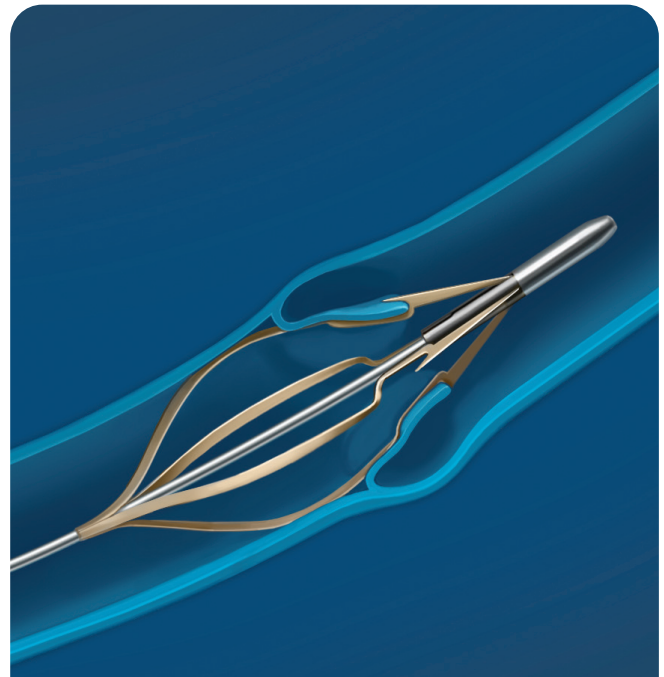

At LeMaitre, we focus on meeting the needs and exceeding the expectations of vascular surgeons with disposable and implantable vascular devices for use in both open vascular surgery and minimally invasive procedures.

Dr. William Raible is a fellowship-trained vascular surgeon with St. Peter's Health Partners Medical Associates. Dr. Raible received his medical degree from Albany Medical College. He completed a residency in both general surgery and vascular surgery at Albany Medical Center, which is considered the origin of the in situ technique. Dr. Raible has completed nearly 500 in situ bypasses since his training. His interests include aneurysm interventions, aortic and thoracic endografts, arterial insufficiency evaluation and treatment, carotid artery disease, peripheral arterial bypass, venous disease, and wound care

Space is limited to 4 Surgeons. For registration and details, contact your local sales representative.
